

As Geographers, our big question is...

# Why should the rainforest be important to all of us ?

REMEMBERING

Prior Learning

- I can use geographical vocabulary to refer to physical features ?
- I can locate poles, equators, hot and cold areas of the world?
- I can identify and classify a wide range of animals based on their features.
- I can discuss how climate affects where animals live.

UNDERSTANDING

Sticky Knowledge

- **Can I explain what biomes are and that rainforest is one type?**
- **Can I identify where most of the world's rainforests are situated?**
- **Can I identify the main features associated with a rainforest?**
- **Can I explain why it is important to protect the rainforests**
- **Can I explain the features of the different layers of a rainforest**

APPLYING

My Aspirations

I could be a biologist, a **scientist who studies biology**. Biologists try to understand the natural world and the things that live in it. These things include plants, animals, and fungi.

## Vocabulary

Deforestation	Indigenous	Biomes	Biodiversity	Extinction	Temperate
When forests are cut down and the area is permanently cleared for another use.	Indigenous people or things belong in the country in which they are found.	Distinct biological communities that have formed in response to a shared physical climate.	The variety of plants and animal life. A high level of which is considered to be important.	The extinction of a species of animal or plant is the death of all it's remaining living members.	Relating to a region or climate characterised by mild temperatures.
